

**HUSKY
TRANSPORT CABIN**

A GENUINE SHOWSTOPPER.

Piunoth

THINGS ARE LOOKING GOOD.

PRINOTH has developed the most **luxurious** and **comfortable** **passenger transport cabin** in the industry. This use of superlatives is entirely justified: the 360° window in this innovative panoramic cabin, which is designed by Pininfarina, allows passengers to enjoy a fantastic view. This type of transport opens up whole new prospects – and it's great fun too.

A REAL HIGHLIGHT

Anyone looking for the best solution for transporting visitors up into the mountains and bringing them safely back down to the valley again need look no further than the new passenger transport cabin from PRINOTH. It is so modern, comfortable, and attractive that the real difficulty will probably be persuading guests to get off again ... Retractable steps offer convenient access to the vehicle's interior for up to nine passengers, who can also enjoy optional Webasto cabin heating, privacy glazing, leather seats, and air conditioning. The ski rack attached to the side can hold a maximum of ten pairs of skis and two snowboards, ensuring that they do not get in the way while they are being transported. The exceptional flexibility offered by this cabin also makes it versatile: there is room inside for several euro-pallets, while the akia (rescue toboggan) fastening system guarantees safety even in an emergency. The best thing about the new transport cabin, however, are actually the mountains themselves, with the glistening snow and the breathtaking view down into the valley. Passengers can experience all this up close thanks to the all-round glazing.

TAKING THE LONG VIEW

The design of the transport cabin is impressive both inside and outside, combining practical functions with aesthetic appeal. A roof window and a window in the door allow fresh air to be let in as required, while all the technology used in the transporter is state-of-the-art. Not only does the cabin offer spectacular views through its windows – this genuine show-stopper looks great itself too.

TECHNICAL DATA
